

a Allele observations from one alignment

observation quality entering the edge weight

class	source	weight
SNV	aligned base, Phred Q	1 if both bases $\geq$ Q12, else 0.1
indel	CIGAR I/D at the site	1; 0.1 if in a tandem repeat
SV	caller read list	1 for ALT, 0.1 for REF
5mC	modcall read lists	1, strand matched

d Tandem-repeat indel flag

G CA CA CA CA CA T +CA / -CA inside the repeat

→ the indel stays in the graph but votes with weight 0.1

b Homopolymer SNV filter (nanopore, --ont)

runs $\geq$ 3 bp, SNVs $\leq$ 2 bp apart

→ drop SNV₂ from every read

c Overlapping-alignment filter

overlap / combined span $\geq$ 0.2

→ discard the shorter alignment A₁

order of operations

extract

b homopolymer

c overlap

d repeat flag
