

a A window is opened around every phased variant with $PE \geq 0.8$

b Bridge-vertex feature

removing this variant disconnects the window
 $\rightarrow$ **is_bridge = 1**

c Centre-zone mask

$$r = |\text{pos} - \text{pos}_c| / \text{max offset in the window}$$

$$\text{kept if } r \leq \min(1, 10 / \text{round}(20 \cdot r_{\text{max}}))$$

$r_{\text{max}} = 1$ in practice, so the zone is the central half of the span
