a Allele-pair support between u and v

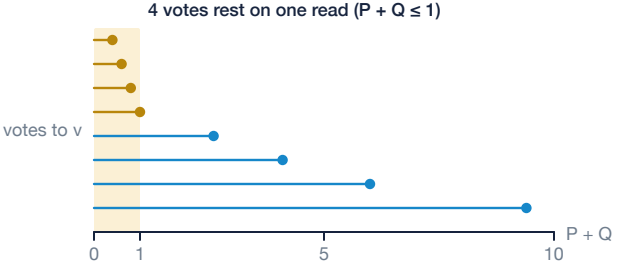

b Vote rule for the pair (u, v)

c Weighted votes from up to k = 35 upstream variants

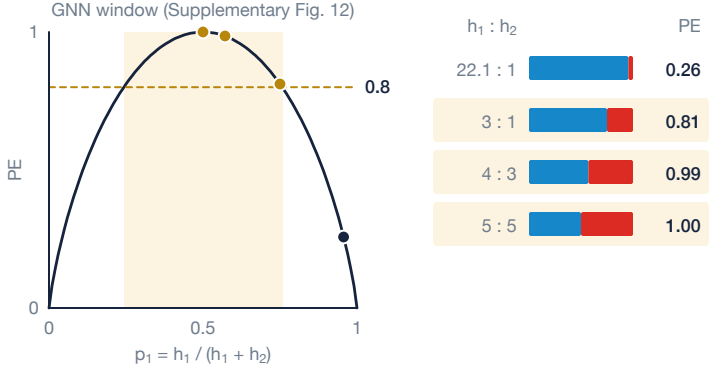

d Single-read guard

> 3 such votes → recompute h_1, h_2
from votes with s < 0.2, weight ≥ 1, non-indel voter only

e Phasing entropy PE = − Σ p_i $\log_2$ p_i

f Block formation

PS = position of the first variant of the block
